

IGNITED MINDS

*We all have ignited minds, but this we don't realize,
A child who thirsts for knowledge should not be stopped,
for in a world of ideas and innovation, he wants to be lost,*

*India, where we can learn myriad things,
is lagging good education in hundreds not in bits,
Only some people think of joining fun with science,*

*so that we may grow up intelligent and wise,
One such workshop "ignited minds" is organized by SPECS,
and its aim is to teach that science is something not to detest,*

*I didn't want to leave the trip at any cost,
as the planned destination were IMA, UPES, ONGC, IIRS and UCOST,
UCOST was indeed, a good place to welcome,
and exploring the science city was an opportunity we got seldom,*

*there we saw a puppet show,
which we unquestionably couldn't say no,
We felt proud to see the passing out parade,*

*it was a moment my heart wouldn't let fade,
The trip to UPES, was certainly very nice,
as in science quiz, I got the first prize,
everyone there were very polite,
which made our day even more bright,
Then we visited ONGC,
where we saw models of rigs on land and sea,
there we also learnt about petrol,
and things that were made from it such as Vaseline and charcoal,
Learning about satellites at IIRS was real fun,
but apart from fun there were also many interesting things to learn,
Himalayan Drug Company was the place visited at last,
where we came to know about the world of medicinal plants,
We also learnt about intellectual property rights,
Which includes patent, trademark and copyright,
Altogether we learnt that science is our friend,
as the lesser it takes, the more it lends.*
